# Final Assignment Instructions

You are asked to create an imaginary online store. Your site will focus on the HTML, CSS, and JavaScript for the site's front-end, but not require a back-end.

Please see detailed requirements in the comments within src/index.html and src/contact.html.

To submit your assignment, you must successfully run the npm run prepare-submission build script discussed below. Please read all of the following information carefully, and don't skip any steps.

NOTE: this assignment combines Assignments 5 and 6 into one, and is worth twice the marks.

## Design Your Store

What will your store sell? In the past students have focused on clothing, jewelry, second-hand clothing, make-up, cakes, tea, and computers. Your store can sell whatever you want, and you can use this as a way to say something about your personality and interests. It can be fun, funny, or serious.

Ideally, you'll build something in this assignment that you'll be proud to show in interviews when applying for co-op positions. Former students have used their stores to showcase their web development skills and get hired.

## Get Inspired

You probably already use many online stores. Take some time to go visit the ones you like, and explore some new ones to get inspired. Here are some examples of stores to get you started:

> Shoes at https://www.nike.com/ca/ and https://www.goat.com/ Stickers at https://www.stickermule.com/ca Computers at https://www.canadacomputers.com/, https://www.bestbuy.ca/en-ca, and https://www.apple.com/ca/ Men's Clothes at https://www.frankandoak.com/ and https://shop.tees.ca/ Women's Clothes at https://www.aritzia.com/en/default and https://6bygeebeauty.com/ Fitness equipment at https://www.roguecanada.ca/ Food at https://www.pipsnacks.com/ Art at https://www.nickmayerart.com/ Coffee at https://www.deathwishcoffee.com/

Notice what's similar and different about each of these, how they use fonts, colours, and images. Pay attention to common layouts. Stores all sell different things, but they use many common patterns in their design and user interface. Try to identify a few of the effective techniques you see in the stores you like and use it to guide your own design.

NOTE: you need to create your own store design, and shouldn't copy anything directly from

another site.

## Writing your code

All of your HTML, CSS, and JavaScript files should be placed in src/.

Upload a zipped file of your submission to Blackboard.
